

# Test chamber for leak test (subjected to internal pressure and bending)

Pneumatic

## Standards

EN 713

## Description

This unit is used for performing leak tests on mechanical joints between fittings and pressure pipes under hydrostatic internal pressure while subjected to bending.

## Specifications

Test pressure	bar	Max. 100
Display of pressure		Manometer
Sample diameter	mm	32 to 80
Sample length		10 x outside diameter
Test temperature	°C	Ambient temperature
Splash protection		●
Endclosure and bending template for each pipe dimension		○
Permissible ambient temperature	°C	+5 to +30
Permissible relative humidity		Max. 70%, non-condensing
Width	mm	1500
Depth	mm	600
Height	mm	1600
Weight	kg	Approx. 200
Voltage data		230/400 V, 50 Hz

● included    ○ available/optional
